MM54C48/MM74C48 BCD-to-7 Segment Decoder

General Description

The MM54C48/MM74C48 BCD-to-7 segment decoder is a monolithic complementary MOS (CMOS) integrated circuit constructed with N- and P-channel enhancement transistors. Seven NAND gates and one driver are connected in pairs to make binary-coded decimal (BCD) data and its complement available to the seven decoding AND-OR-INVERT gates. The remaining NAND gate and three input buffers provide test-blanking input/ripple-blanking output, and ripple-blanking inputs.

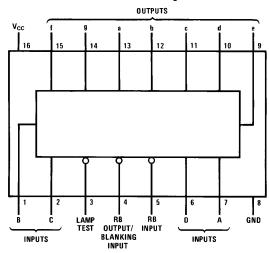

Features

■ Wide supply voltage range 3.0V to 15V
■ Guaranteed noise margin 1.0V
■ High noise immunity 0.45 V_{CC} (typ.)
■ Low power fan out of 2
TTL compatibility driving 74L

- High current sourcing output (up to 50 mA)
- Ripple blanking for leading or trailing zeros (optional)
- Lamp test provision

		$V_{CC} = 10V, V_{OUT} = 8.0V$		-65		mA

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device

Note 3: CpD determines the no load AC power consumption of any CMOS device. For complete explanation see 54C/74C Family Characteristics Application Note,

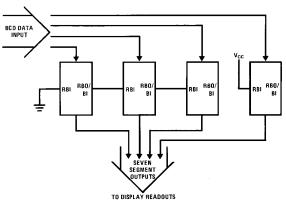

Note 2: Capacitance is guaranteed by periodic testing.

Symbol	Parameter	Conditions	Min	Тур	Max	Units
t_{pd0} , t_{pd1}	Propagation Delay to a "1" or "0" on	$V_{CC} = 5.0V$		450	1500	ns
	Segment Outputs from Data Inputs	$V_{CC} = 10V$		160	500	ns
t _{pd0}	Propagation Delay to a "0" on	$V_{CC} = 5.0V$		500	1600	ns
	Segment Outputs from RB Input	$V_{CC} = 10V$		180	550	ns
t _{pd0}	Propagation Delay to a "0" on	$V_{CC} = 5.0V$		350	1200	ns
	Segment Outputs from Blanking Input	$V_{CC} = 10V$		140	450	ns
t _{pd1}	Propagation Delay to a "1" on	$V_{CC} = 5.0V$		450	1500	ns
	Segment Outputs from Lamp Test	$V_{CC} = 10V$		160	500	ns
t _{pd1}	Propagation Delay to a "1" on RB	$V_{CC} = 5.0V$		600	2000	ns
	Output from RB Input	V _{CC} = 10V		250	800	ns
t _{pd0}	Propagation Delay to a "0" on RB	$V_{CC} = 5.0V$		140	450	ns
	Output from RB Input	$V_{CC} = 10V$		50	150	ns

^{*}AC Parameters are guaranteed by DC correlated testing.

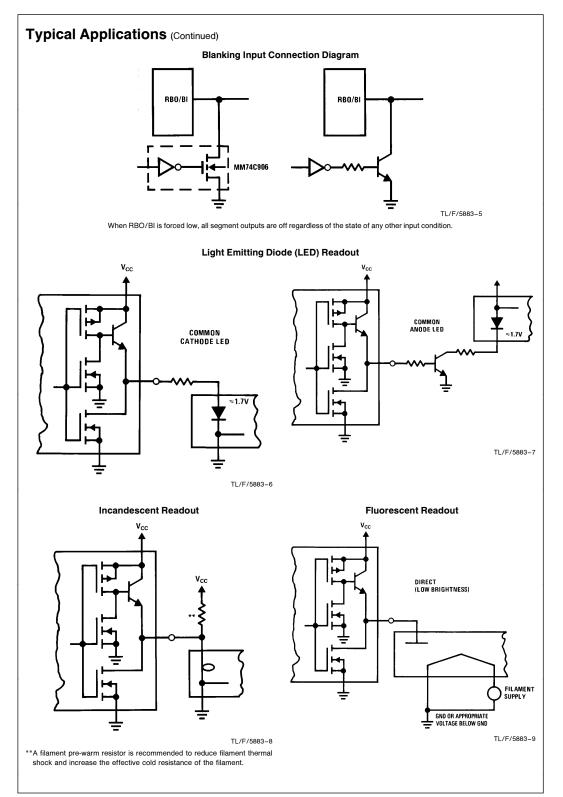

Typical Applications

Typical Connection Utilizing the Ripple-Blanking Feature

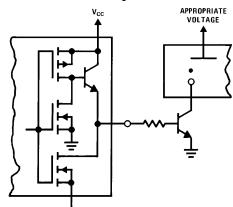

TL/F/5883-4

First three stages will blank leading zeros, the fourth stage will not blank zeros.

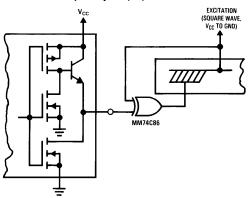

Typical Applications (Continued)

Gas Discharge Readout

Liquid Crystal (LC) Readout

 $$\operatorname{TL/F}/5883-11$$ Direct DC drive of LC's not recommended for life of LC readouts.

H = high level, L = low level, X = irrelevant

Note 1: The blanking input (BI) must be open when output functions 0-15 are desired. The ripple-blanking input (RBI) must be high, if blanking of a decimal zero is not desired.

Note 2: When a low logic level is applied directly to the blanking input (BI), all segment outputs are low regardless of the level of any other input.

Note 3: When ripple-blanking input (RBI) and inputs A, B, C, and D are at a low level with the lamp-test input high, all segment outputs go low and the ripple-blanking output (RBO) goes to a low level (response condition).

Note 4: When the blanking input/ripple-blanking output (BI/RBO) is open and a low is applied to the lamp-test input, all segment outputs are high. †One BI/RBO is wire-AND logic serving as blanking input (BI) and/or ripple-blanking output (RBO).

Molded Dual-In-Line Package (N) Order Number MM54C48N or MM74C48N NS Package Number N16E

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
